

## GUIDEBOOK FOR STEEL-CONCRETE COMPOSITE CONSTRUCTION - DESIGN PROCEDURES OF STRUCTURAL ELEMENTS

The general code of practice for composite construction IS: 11384 – 2022 has recently been published by the BIS. Unlike the earlier version, this code contains all types of composite elements like slabs, beams, columns etc. INSDAG, who played the pivotal role for revision of IRC: 22 to its present version, again took up the responsibility of revising IS: 11384 under the aegis BIS and completed the revision to its present form, which has been published by BIS recently.

This publication gives a brief knowhow about steel-concrete composite design. Since there are only few publications on composite design, the basic aspects of designs of various structural elements like slabs, beams, columns have been elaborated in brief. The main thrust has been the design examples as given in this publication giving step-by-step design procedures of all the above structural elements based on IS: 11384 - 2022.

# CONTENTS

<b>Chapter 1.0</b>	<b>STEEL-CONCRETE COMPOSITE CONSTRUCTION – AN OVERVIEW</b>		
	1.1	Introduction	
	1.2	Composite Construction in the Developed Countries	
	1.3	Indian Scenario	
	1.4	Efficient Sections	
	1.5	Codes and Standards	
	1.6	Design Procedures of Composite construction	
<b>Chapter 2.0</b>	<b>DESIGN OF COMPOSITE SLABS</b>		
	2.1	Basic configuration of Composite Slabs	
	2.2	Profiled Sheet Decking and its Design	
	2.3	m-k Values for Sheets	
	2.4	Worked-out Examples	
<b>Chapter 3.0</b>	<b>DESIGN OF COMPOSITE BEAMS</b>		
	3.1	Composite Beams or Girders	
	3.2	Elastic Behavior of Composite Beams	
	3.3	Shear Connectors	
	3.4	Moment of Resistance of Composite Beams for Sagging Moment (IS: 11384)	
	3.5	Moment of Resistance of Composite Beams for Hogging Moment	
	3.6	Worked-Out Examples for Composite Beams	
<b>Chapter 4.0</b>	<b>DESIGN OF COMPOSITE COLUMNS</b>		
	4.1	General Design Philosophy	
	4.2	Short Compression Members	
	4.3	Design Bending Resistance of Composite Columns	
	4.4	Second Order Effects on Bending Moments	
	4.5	Member Subjected to Axial Force and Uni-axial Bending	
	4.6	Member Subjected to Axial Force and Bi-axial Bending	
	4.7	Worked-out Examples for Composite Columns	
<b>Chapter 5.0</b>	<b>DESIGN OF BEAMS WITH WEB OPENINGS</b>		
	5.1	Introduction	
	5.2	Basic Philosophy	
	5.3	Basic Guidelines for Provisions of Web openings	
	5.4	Worked-Out Examples for Composite Beams with Web Openings	
	<b>APPENDICES</b>	<b>33 - 130</b>	
<b>Appendix – A</b>	Problem – 1	Design Example for Composite Slab	33
<b>Appendix – B</b>	Problem – 1	Design of Simply Supported Floor Beam (Plated Section)	38
	Problem – 2	Design of Simply Supported Floor Beam with Rolled Section	44
	Problem – 3	Design of Frame Beams for Hogging Moment (Compact Section)	50
	Problem – 4	Design of Frame Beams for Hogging Moment (Non-Compact Section)	56
<b>Appendix – C</b>	Problem – 1	Steel Encased Rectangular Composite column with Star cross section	62
	Problem – 2	Steel Encased Square Composite column with Star cross section	71
	Problem – 3	Concrete filled Rectangular Tubular Steel Column	80
	Problem – 4	Concrete filled Square Tubular Steel Column	87
<b>Appendix – D</b>	Problem – 1	Design of Simply Supported Beam with Web Opening	94
<b>Appendix – E</b>		References	130
